

CLAIMS

1. An optical disk drive comprising:
temperature measurement means for measuring an
internal temperature of the optical disk drive; and
resetting means which resets offset values and/or
a laser output value in accordance with changes in the
temperature measured by the temperature measurement
means.

10 2. The optical disk drive claim 1, wherein the
offset values include a focus offset value and/or a
tracking offset value.

15 3. An optical disk drive comprising:
temperature measurement means for measuring an
internal temperature of the optical disk drive;
determination means for determining whether or not
the level of change in the temperature measured by the
temperature measurement means has exceeded a
predetermined level; and

20 offset value resetting means which resets a focus
offset value and/or a tracking offset value when the
determination means determines that the level of change
in temperature has exceeded a predetermined level.

25 4. An optical disk drive comprising:
temperature measurement means for measuring an
internal temperature of the optical disk drive;
determination means for determining whether or not

the level of change in the temperature measured by the temperature measurement means has exceeded a predetermined level;

offset value resetting means which resets a focus

5 offset value and/or a tracking offset value when the determination means determines that the level of change in temperature has exceeded a predetermined level; and

laser output resetting means which resets a laser output value of a light-emitting section, the laser being 10 output from the light-emitting section for recording and/or reproducing data on and/or from an optical disk, when the determination means determines that the level of temperature change has exceeded a predetermined level.

15 5. The optical disk according to claim 4, wherein the optical disk drive further has storage means for storing temperature data pertaining to a relationship between a temperature and a laser output value; and the laser output resetting means performs

20 resetting operation in accordance with [the temperature table] when the laser output resetting means resets the laser output value.

6. The optical disk according to claim 5, wherein a relationship between a temperature and a laser output 25 value for a recording operation and that for a reproducing operation are provided in the temperature table.

7. An optical disk drive comprising:
temperature measurement means for measuring an
internal temperature of the optical disk drive;
determination means for determining whether or not
5 the level of change in the temperature measured by the
temperature measurement means has exceeded a
predetermined level; and

laser output resetting means which resets a laser
output value of a light-emitting section, the laser being
10 output from the light-emitting section for recording
and/or reproducing data on and/or from an optical disk,
when the determination means determines that the level
of temperature change has exceeded a predetermined
level.

15 8. The optical disk according to claim 7, wherein
the optical disk drive further as storage means for
storing temperature data pertaining to a relationship
between a temperature and a laser output value; and
the laser output resetting means performs
20 resetting operation in accordance with the temperature
table when the laser output/resetting means resets the
laser output value.

9. The optical disk according to claim 8, wherein
a relationship between a temperature and a laser output
25 value for a recording operation and that for a
reproducing operation are provided in the temperature
table.

10. An optical disk drive comprising:
setting means for setting a focus offset value
and/or a tracking offset value at startup of the optical
disk drive;

5 first temperature measurement means for measuring
an internal temperature of the optical disk drive at
startup of the optical disk drive;

10 second temperature measurement means for
measuring an internal temperature the optical disk drive
after startup of the optical disk drive;

15 determination means for determining whether or not
a difference between the temperature measured by the
second temperature measurement means and the
temperature measured by the first temperature
measurement means has exceeded a predetermined level;
and

20 resetting means for resetting the focus offset
value and/or the tracking offset value set by the setting
means when the determination means determines that the
difference has exceeded the predetermined level.

11. The optical disk drive according to claim 10,
wherein the second temperature measurement means
measures a temperature at predetermined times;
the determination means determines whether or not
25 a difference between a temperature most recently
measured by the second temperature measurement means and
an immediately preceding temperature measured by the

second temperature measurement means has exceeded a predetermined level; and

resetting means resets a set focus offset value and/or a set tracking offset value when the determination means determines that the difference has exceeded the predetermined level.

12. An optical disk drive comprising:

setting means for setting a laser output value of a light-emitting section, the laser being output from the light-emitting section for recording and/or reproducing data on and/or from an optical disk, at startup of the optical disk drive;

first temperature measurement means for measuring an internal temperature of the optical disk drive at startup thereof;

second temperature measurement means for measuring an internal temperature of the optical disk drive after startup thereof;

determination means for determining whether or not a difference between the temperature measured by the second temperature measurement means and the temperature measured by the first temperature measurement means has exceeded a predetermined level; and

resetting means for resetting the laser output value set by the setting means when the determination means determines that the difference has exceeded the

predetermined level.

13. The optical disk drive according to claim 12, wherein the second temperature measurement means measures a temperature at a predetermined time;

5 the determination means determines whether or not a difference between a temperature most recently measured by the second temperature measurement means and an immediately preceding temperature measured by the second temperature measurement means has exceeded a
10 predetermined level; and

the resetting means resets a set laser output value when the determination means determines that the difference has exceeded the predetermined level.

14. An optical disk drive comprising:

15 a temperature sensor for sensing an internal temperature of the optical disk drive; and

16 a controller for resetting offset values and/or a laser output value in accordance with changes in the temperature detected by the temperature sensor.

20 15. The optical disk drive according to claim 14, wherein the offset values include a focus offset value and/or a tracking offset value.

16. An optical disk drive comprising:

25 a temperature sensor for sensing an internal temperature of the optical disk drive; and

17 a controller for resetting offset values and/or a laser output value in accordance with changes in the

temperature detected by the temperature sensor, wherein
the controller determines whether or not the level
of change in the temperature measured by the temperature
sensor has exceeded a predetermined level and resets a
5 focus offset value and/or a tracking offset value when
the level of temperature change is determined to have
exceeded the predetermined level.

17. The optical disk drive according to claim 16,
wherein the temperature sensor is mounted on the exterior
10 surface of a pickup provided in the optical disk drive.

18. An optical disk drive comprising:
a temperature sensor for sensing an internal
temperature of the optical disk drive; and
a controller for setting a focus offset value
and/or a tracking offset value and setting a laser output
15 value of a light-emitting section, the laser being output
from the light-emitting section for recording and/or
reproducing data on and/or from an optical disk, wherein
the controller determines whether or not the level of
20 change in the temperature measured by the temperature
sensor has exceeded a predetermined level and resets the
focus offset value and/or the tracking offset value and
the laser output value when the level of temperature
change is determined to have exceeded the predetermined
25 level.

19. The optical disk drive according to 18, wherein
the optical disk drive has memory for storing a

temperature table showing a relationship between a temperature and a laser output value; and

the controller resets the laser output value in accordance with the temperature table.

5 20. The optical disk drive according to claim 19, wherein the temperature table includes a relationship between a temperature and a laser output value for a recording operation and that for a reproducing operation.

10 21. An optical disk drive comprising:

a temperature sensor for sensing an internal temperature of the optical disk drive; and

15 a controller for setting a laser output value of a light-emitting section, the laser being output from the light-emitting section for recording and/or reproducing data on and/or from an optical disk, wherein

20 the controller determines whether or not the level of change in the temperature measured by the temperature sensor has exceeded a predetermined level and resets the

laser output value when the level of temperature change is determined to have exceeded the predetermined level.

22. The optical disk according to claim 21, wherein the optical disk drive further comprises memory having stored therein a temperature table showing a relationship between a temperature and a laser output value; and

the controller resets the laser output value in

accordance with the temperature table.

23. The optical disk according to claim 22, wherein the temperature table includes a relationship between a temperature and a laser output value for a recording operation and that for a reproducing operation.

24. An optical disk drive comprising:
a temperature sensor for sensing an internal temperature of the optical disk drive; and
a controller for setting a focus offset value and/or a tracking offset value, wherein

the controller sets a focus offset value and/or tracking offset value at startup of the optical disk drive, determines whether or not a difference between a temperature measured by the temperature sensor at startup of the optical disk drive and a temperature measured by the temperature sensor after startup of the optical disk drive has exceeded a predetermined level, and resets the focus offset value and/or the tracking offset value when the difference is determined to have exceeded the predetermined level.

25. The optical disk drive according to claim 24, wherein the controller measures the temperature detected by the temperature sensor at given times, determines whether or not a difference between a most-recently measured temperature and a measured temperature preceding the most-recently measured temperature has exceeded a predetermined level, and

resets a set focus offset value and/or a set tracking offset value when the difference is determined to have exceeded a predetermined value.

26. An optical disk drive, comprising:

5 a temperature sensor for sensing an internal temperature of the optical disk drive; and

a controller for setting a laser output value of a light-emitting section, the laser being output from the light-emitting section for recording and/or

10 reproducing data on and/or from an optical disk, wherein

the controller sets the laser output value at startup of the optical disk drive, determines whether or not a difference between a temperature measured by the temperature sensor at startup of the optical disk drive and a temperature measured by the temperature sensor after startup of the optical disk drive has exceeded a predetermined level, and resets the laser output value when the difference is determined to have exceeded the predetermined level.

20 27. The optical disk drive according to claim 26,

wherein the controller measures the temperature detected by the temperature sensor at given times, determines whether or not a difference between a most-recently measured temperature and a measured

25 temperature preceding the most-recently measured temperature has exceeded a predetermined level, and resets a set laser output value when the difference is

determined to have exceeded a predetermined value.
